"TEACHING METHODS IN EDUCATION SYSTEM"

Sonwane Baban Keshawrao, Research Scholar, Swami Ramanand, Marathwada University,
Nanded

Abstract: The education is base of life. The meaning of education is defined by many scholars and quoted as Change in behavior is the Education. This change is matter of development in the life and education. Today's scenario is education system is drastically changed. The new methods, new technical tools are used developed in this global, modern and technical era. There are huge fees structures for private sectors. The need of English is the cause to increase the importance of English medium schools. The privatization is the mode of current English medium school. This made parents less interested in Education system. The current paper is an attempt to focus on the current education system and the approaches of parents toward education and education system in Maharashtra.

Key Words: Education, system, current era, parents, methods and approaches of teaching-learning, parents' approach towards education system etc.

Introduction:

The process of teaching-learning is continues process of human development. The informal process of education is called as informal education. Later, there was the development in Indian Education system with introduction of Gurukul. In this system, the disciples had to live at the Guru's Ashrama and serve for Guru and learn. The Formal schooling in India is the matter of Education in the period of British Rulers. After independence of India, there are lots of changes in Education system. There are changes in teaching methods. The way in which the teacher imparts knowledge to the learner is called teaching method. The term "teaching method" is used in a very broad sense. On one hand, many systems and schemes are included in it; on the other hand many teaching procedures are also included. Sometimes people accept tips as a method; but it is a mistake to do so. Tips can be part of a method, not a complete method. The same device can be used in many methods. Few common used methods in teaching are explained below:

Various Teaching Methods:

Deductive and Inductive: There are many methods used in teaching-learning process in Maharashtra. In presenting text, there are two ways to present text. In one, students are given several examples to test or confirm a general principle. In the second, a general rule is extracted from the students by giving several examples first. The first method is called deductive method and the second method is inductive method. This method is considered the most suitable for teaching grammar. Several structures are defined by various scholars, few of them which are used in teaching-learning process of Maharashtra.

Synthetic and Analytical:

From the other point of view of text representation, there are two types of teaching method which are used in Maharashtra. If the method of presenting the text is by first giving the knowledge of the organs and then the knowledge of the complete thing is made, then it is called the 'Synthesis Method.' For example, in teaching Hindi, first the alphabet is taught and then words are taught then words are made into sentences.

The method in which the first sentence is taught and then the word and the letter at the end are taught, it will be called analytical method because it moves from the complete to the organs.

Methods of Teaching in General:

One of the well-known sources of teaching is "From the Tangible to the Intangible". In fact, we have knowledge of the outer world through our senses, in which the eyes are prominent. When we see an

Abstract:

Today's era is the technical and development era. The overall development of human beings depends on education. Also, education is a means of distinguishing between human beings and animals. Every person needs to get a good education in order to move forward in their life and achieve good success. Education helps us to build our confidence and our personality. Education plays a big role in every person's life. Education is not about reading books, passing exams and passing. So education is a learning process that goes on from birth to death. Home is the first place in every person's life. Parents are the first teachers in every child's life. They nurture their children with good manners. They then send their children to school and the teachers give them a good turn and work to make them a better citizen of the country. However, many reports show that the quality of education is declining. Since, education is still dominated by the government; the government's apathy towards education is to blame. The foundation of students' education and personality is laid in the school itself. Success in further education depends on the education, values and values received in the school. At the same time, the future of the country depends on the education received in schools.

Key Words: Education, parents, future, education, students, values, countries, personality, teaching, learning etc.

Introduction: Education is very important in everyone's life. The education system has three parts namely primary education, secondary education and higher secondary education in India. All levels of education have special significance and place. Elementary education provides the infrastructure for students, which helps throughout life. Secondary education paves the way for future life. In today's age and society, education has become very important. There are many uses for education. But it needs to take a new turn. Education should be such that a person can become familiar with those around him. It is also important to get your education. One can achieve goals through education in their lives. At the same time, people with higher education get social and family respect. They create a distinct identity in the society. The time of education is also very important for everyone, socially and personally. Because of this, education is very important in the life of all.

Today's Education and System: Today is the age of computer. This science has made many things easier for human beings. Also his education level is increasing.

Education has the biggest role to play in today's age of modern technology. It has also facilitated many ways to increase the level of education. Now the whole education system has changed. Education is not something that is very expensive.

Anyone can continue their education with money. Today even small institutions are teaching to promote skills in a specific field.

Education in Maharashtra: Education is an asset that no one can steal. It is also the only asset that does not diminish when given to anyone. But instead it grows more so, educated people are respected in our society.

So everyone wants to be trained to be literate. Therefore, education is very important in today's age as well as in our lives.

In the last half century, education in Maharashtra has expanded a lot. He was particularly interested in the Nasgirk population growth, parents' commitment to their children's education, the efforts of government and private educational institutions, and the growing financial support of the central
